OVER 1 MILLION DROPOUTS

There was a lot to crow about for some in the June employment situation report on Thursday ahead of the July 4 holiday. Bond yields rose 7 bps to 4.35% thinking no immediate Fed rate cuts after payroll employment rose 147K, above 110K consensus, and the unemployment rate dropped a tenth to 4.1% instead of moving higher to 4.3% as the weekly jobless claims data suggested.

There have been many dropouts from the labor force the last two months as well, 329K in June and 813K in May, maybe some have given up looking for work which keeps unemployment artificially low. Only time will tell as they say whether there is a trade war slowdown. The economy is not setting any landspeed records for growth with real consumer spending of 0.5% in Q1 2025 and Q2 running 1.3%, where 2-3 percent is normal. There was some bad winter weather in Q1 2025 of course.

Labor force dropouts are more complicated than normal after the pandemic surge and the larger than normal new population estimates released with the BLS January employment situation report on February 7. Dropouts are supposed to trend higher over time as the total population grows, but rising too quickly could indicate a problem. The BLS said the population jump was in part due to the net migration trend, which may make one wonder about a reversal given the new Administration's immigration policies. The breakdown of the 3.047 million increase in population from December to January is probably not what you were thinking. The picture is complex. There was a 937 thousand increase in the Asian population with 463K Asian Indian and 417K Chinese. There are the normal BLS categories based on race, and Hispanic ethnicity is presented/broken-out separately. Hispanic or Latino was 1.66 million (54.5%) of the total 3.047 million December to January change. Puerto Rican was the largest with 348K followed by Dominican 266K, Salvador 260K and Mexican 218K.

Dec 2024 to Jan 2025 Population Changes (thousands)					
3047 Total	3047 Total	3047 Total			
1490 White	937 Asian	1660 Non-Hispanic			
427 Black	463 Asian Indian	1386 Hispanic/Latino			
937 Asian	417 Chinese	218 Mexican			
241 American Indian	-103 Filipino	348 Puerto Rican			
-62 Hawaiian	63 Japanese	54 Cuban			
13 Two+ races	73 Korean	385 Central America			
	-9 Vietnamese	260 Salvador			
	35 Other Asian	125 x-Salvador			
		-104 South America			
Civilian noninstitutional population		487 Other			
16 years and older		266 Dominican			
		222 x-Dominican			

The 147K June payroll jobs number was thought to be solid, but private jobs increased 74K the weakest this year. Government jobs rose 73K somehow, education jobs at the state and local level occurred even as schools were closing for the summer. Federal government jobs ex-post office have fallen 59.8K this year as the incoming administration seeks to make the government "small." Nothing stands out in the slowdown in private jobs: less new jobs from education/health; and bars and restaurant hiring is in a soft patch, a sector that often has leading indicator properties. If more factories are coming to the USA, manufacturing hiring is still down.

The Household Survey of employment is weak, although it may be trying to digest the surge in the population estimates at the start of the year as well, where the December to January employment change was plus 2.234 million. It was not a strong jobs report in June, but it is not a recession either. Payroll employment has to fall for a few months before recession is confirmed. Stay tuned. Watch here where the world goes next.

Private payroll jobs growth modest in June

INTEREST RATES

Bond yields made it down to 4.19% on Tuesday before the stronger Jolts data at 10am ET which extended the rally from the yield peak of 4.63% on May 22. The jobs data on Thursday were stronger than expected as well, sending yields to 4.35%. The stock market made an all-time high on Thursday with the jobs report, but before you count your winnings, S&P futures fell on Friday with the cash markets closed, down 0.6% as Trump readies more tariffs, sending out pay-us letters to those countries he could not make a deal with. The S&P 500 closed up 0.8% on Thursday, a 6.8% year-to-date gain, at 6,279.35. Jobless claims are the only major economic news ahead in the July 11 week as the markets look forward to additional Trump tariff news.

Microsoft (MSFT) up 18.3% YTD

The company reported better earnings after the bell on Tuesday, April 30 and helped lift the entire market with its 7.6% gain on Wednesday. Intelligent Cloud revenue was up 21% from a year ago and expectations for calendar Q2 is for Cloud revenue of \$28.75 to \$29.05. EPS was \$3.46 versus \$3.22 expected. Revenue overall was \$70.1 billion versus \$68.4 expected.

Calendar Year	Productivity	Business	Intelligent	More
	Revenue	Processes	Cloud	Personal Computing
Q1 2025	70,066	29,944	26,751	13,371

Q4 2023	27,032	14,515	9,555	2,962

FEDERAL RESERVE POLICY

The Fed meets July 29-30, 2025 to consider its monetary policy. The market is more convinced that the Fed funds rate will be closer to 3% next year even though the latest FOMC forecasts were adjusted higher and policymakers now expect 3.75% at the end of 2026. The President wants substantially lower interest rates, keeps working to replace Powell early, and the SOFR futures seem to reflect that. Powell says interest rates would be lower if not for the import tariff effect which has not yet hit the monthly data. The FOMC looks for Q4 2025 core PCE inflation of 3.1% year-on-year, up from 2.8% in their March forecasts and actual core PCE inflation was 2.7% in May, although market-based core PCE inflation of 2.4% is closer to the Fed's 2.0 target.

OTHER ECONOMIC NEWS

Total number on the nation's jobless rolls stick at 2025 high (Thursday)

Breaking economy news. First-time jobless claims have come back down to 233K in the June 28 week from the recent peak of 250K in the June 7 week. The increase in initial claims filings after the middle of May pushed continuing unemployment claims, the total number of Americans receiving benefits, to the 2025 peak of 1.964 million for the last two weeks. [Thursday's employment report saw the unemployment rate drop one-tenth to 4.1% in June; or 7.237 million in May to 7.015 million in June, going the wrong way from the direction continuing unemployment claims were pointing. Another economic puzzle.]

Trade deficit (Thursday 830am ET)

\$mln	Trade balance			Exports			Imports		
	Total	Goods	Services	Total	Goods	Services	Total	Goods	Services
Apr 2025	-60,257	-86,304	26,048	290,572	191,597	98,976	350,829	277,901	72,928
May 2025	-71,517	-97,511	25,994	279,000	180,207	98,793	350,517	277,718	72,799
Change	-11,260	-11,207	-54	-11,572	-11,390	-183	-312	-183	-129

Breaking economy news. The trade data have been volatile as US importers pushed orders forward to attempt to beat the Trump tariff increases, uncertain as they may be. Net exports were a 4.6 percentage point drag on the real GDP -0.5% results for Q1 2025. The surge in imports was somewhat offset by higher inventories which added 2.6 percentage points to real GDP in the first quarter. Now the extremes of the first quarter are reversing. Imports of goods NSA are back down to \$63.9 billion in May 2025 from the March 2025 surge to \$99.4 billion. Trump's reciprocal tariffs from April 2 were paused just days later, but time is up on July 9. Stay tuned.
